The PT-DZ21K is not equipped with a lens.

Product Number: PT-DZ21K

Product Name: 3-Chip DLP™ Projector

Specifications

Main unit

DLP™ chip

Power supply 200-240 V AC, 12 A, 50/60 Hz (3-wire single-phase)

2,300 W (2,350 VA) (0.3 W with STANDBY MODE set to ECO.*1 9 W with Power consumption

STANDBY MODE set to NORMAL.),

max. 7,848 BTU (without light output: 7,585 BTU) Panel size 24.4 mm (0.96 inches) diagonal (16:10 aspect ratio)

DLP™ chip × 3 (R, G, B), DLP™ projection system Display method

Pixels $2,304,000 (1,920 \times 1,200) \times 3$, total of 6,912,000 pixels

Lens Optional powered zoom/focus lenses 465 W UHM lamps (x 4) (four lamp system) Lamp

Screen size 1.78-15.24 m (70-600 inches) (1.78-7.62 m (70-300 inches) with the

ET-D75LE50), 16:10 aspect ratio

Brightness*2 20,000 lumens (four lamp)

Center-to-corner uniformity*2

Contrast*2 10,000:1 (full on/full off, in dynamic iris 3 mode)

Resolution $1,920 \times 1,200$ pixels (Input signals that exceed this resolution will be

converted to 1,920 x 1,200 pixels.)

- *1 When the standby mode is set to eco, network functions such as power on over the LAN network will not operate, and the serial output terminal cannot be used. Also, only certain commands can be received for external control using the serial terminal.
- *2 Measurement, measuring conditions, and method of notation all comply with ISO 21118 international standards.
- *3 Up to a total of ±55° during simultaneous horizontal and vertical correction
- *4 WUXGA resolution is supported only when the signals are compliant with VESA CVT-RB (Coordinated Video Timing-Reduced Blanking).
- *5 With legs at shortest position.
- *6 Excluding the optional lens.
- *7 Average value (excluding the optional lens). May differ depending on models.
- *8 The operating temperature range is 0 °C to 40 °C (32 °F to 104 °F) when the FAN CONTROL is set to HIGH ALTITUDE MODE (for altitudes from 1,400 m to 2,700 m (4,593 ft to 8,858 ft) above sea level). When the projector is used with the ET-SFR510 Smoke Cut Filter, the operating temperature range is 0 °C to 35 °C (32 °F to 95 °F), and the projector cannot be used in places at high altitude. The operating temperature range is 0 °C to 40 °C (32 °F to 104 °F) when the ET-LAD510P/LAD510PF lamp is mounted and the projector is used in portrait configuration. The operating temperature range is 0 °C to 35 °C (32 °F to 95 °F) when the FAN CONTROL is set to HIGH ALTITUDE MODE (for altitudes from 1,400 m to 2,700 m (4,593 ft to 8,858 ft) above sea level). When the projector is used with the ET-SFR510 Smoke Cut Filter, the operating temperature range is 0 °C to 30 °C (32 °F to 86 °F).
- *9 Operation range differs depending on environments.

NOTE:

Illustrations show the projector installed using optional ceiling mount bracket ET-PKD510H and an optional lens.

This illustration is not drawn to scale.

Caution:

- All construction work should be done by a qualified technician.
- When mounting to the ceiling, use the special mounting bracket. To prevent the projector from swaying or dropping, attach the wire that is included with the projector between the mounting bracket and the ceiling.

- The value for L (distance to screen) varies slightly within ±5% depending on the zoom lens characteristics.
- At the shortest projection distance, the zoom lens characteristics may cause slight image distortion.
- . When vertical keystone correction is used, the image is corrected in the direction that reduces its projected size.

NOTE: When the ET-D75LE50 is mounted, the optical lens shift function cannot be used.

[•] Distances calculated with the above equations will include slight deviations.

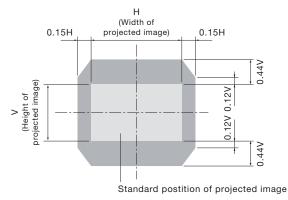

Shift range

Optical axis shift function allows to shift the position of a projected image as shown below.

• When the lens except the ET-D75LE6 is mounted

• When the ET-D75LE6 is mounted

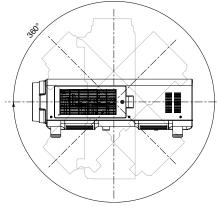

NOTE: Because the ET-D75LE50 is a fixed short-throw lens, the lens shift function cannot be used with it.

Installable angle

Install the projector at an angle within the range shown below.

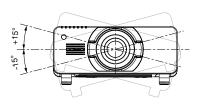

• Vertical direction

The projector may be installed at a vertical angle of 360°.

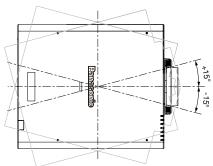

• Horizontal direction

The projector may be installed at a horizontal angle of ±15°.

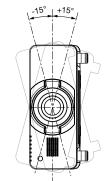

• Vertical direction in portrait mode with the ET-LAD510P/LAD510PF mounted

The projector may be installed at a vertical angle of ±15°.

• Horizontal direction in portrait mode with the ET-LAD510P/LAD510PF mounted

The projector may be installed at a horizontal angle of ±15°.

NOTE: The projector cannot be vertically installed all by itself. Also, the terminal side must face downward when vertically installed.

List of compatible signals

The signals that can be input to this projector are shown in the table below. Horizontal scanning frequencies of 15 kHz to 100 kHz, vertical scanning frequencies of 24 Hz to 120 Hz, and a dot clock of 162 MHz maximum can be input.

NOTE: The native resolution of this projector is 1,920 × 1,200 pixels. If the display resolution of the input signal is different from the native resolution, image compression or expansion will be used to convert the input signal to a level within the native resolution.

Serial connector

The serial connector complies with RS-232C. To control the projector from a personal computer, commands must be input through communication software, based on the format and satisfying the communication conditions shown below.

Basic format

Transmission from the computer begins with STX, then the ID, command, parameter, and ETX are sent in this order. Add parameters according to the details of control.

CAUTION

- . It may not be possible to send or receive commands for about 10 to 60 seconds when the lamp is first turned on. If this occurs, wait for 60 seconds, then try sending or receiving again.
- . When sending multiple commands, be sure to wait for at least 0.5 second after receiving a response from the projector before sending the next command.
- · Additional time is sometimes required for response due to processing inside the projector. Set the time-out period for command response to 10 seconds or more.
- When using two or more units:
 - 1) Set different IDs for each unit.
 - 2) Designate only one unit as RESPONSE (ID ALL) ON and the rest as RESPONSE (ID ALL) OFF.
 - 3) Each group should have only one RESPONSE (ID GROUP) ON and the rest should be RESPONSE (ID GROUP) OFF.

Command example

To set the on-screen display off, send the command as shown below.

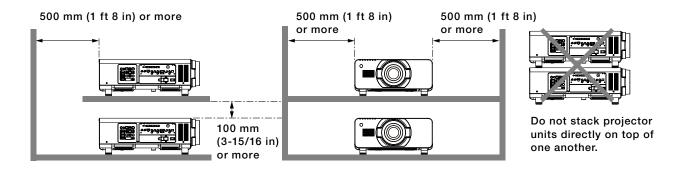

NOTE: When sending commands without parameters, a colon (:) is not necessary.

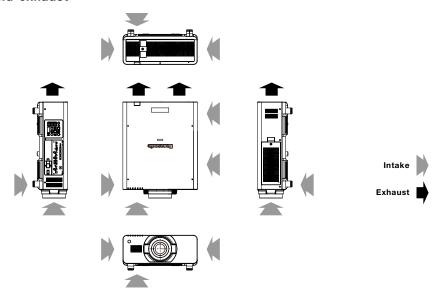

Notes on projector placement and operation

The projector uses a high-wattage lamp that becomes very hot during operation. Please observe the following precautions.

- 1. Never place objects on top of the projector while it is operating.
- 2. Make sure there is an unobstructed space of 500 mm (1 feet 8 inches) or more around the projector's exhaust openings.
- 3. Do not stack projector units directly on top of one another. If two units must be stacked for backup use in ordinary projection, use a method as shown below and provide ample space between the units to ensure that exhaust heat does not accumulate near the intake opening or around the units. Dual stacked projection is not recommended.
- 4. Make sure that nothing blocks the projector's air intake and exhaust openings. Also, install the projector so that cool or hot air from other air conditioning equipment does not flow directly toward the projector's air intake or exhaust openings.
- 5. Do not install the projector in an enclosed space. If it is necessary to install it in an enclosed space, add a separate ventilation system. If ventilation is insufficient, hot air will accumulate at the intake opening. This may cause the projector's protective circuit to interrupt projector operation.
- 6. If the projector is installed in an enclosed space, ensure that the temperature of the air surrounding the projector is between 0°C and 40°C (32°F and 104°F). Also make sure that the projector's intake and exhaust openings are not blocked. Even though the air surrounding the projector is 40°C (104°F) or less, if hot exhaust air accumulates inside the space, it may cause the projector's protective circuit to interrupt projector operation. Pay particular attention to the surrounding temperature conditions when planning the installation.
- 7. If the projector is not to be set on the floor using adjuster legs, install it by using the five ceilingmount screw holes (screw diameter: M6, length of each screw hole in the projector: 30 mm (1-3/16 inches)). Provide a space of 5 mm (3/16 inches) or more between the projector and the mounting surface by inserting metal spacers.

Direction of air intake and exhaust

Operating the projector continuously

- If the projector is to be operated continuously one week, use the quad-lamp optical system's alternating lamp operation (lamp relay) function. The projector cannot be operated continuously one week in quadlamp mode. Allow a minimum of two hours per day of non-operation time for each lamp if the projector is to be operated continuously for more than one week.
- The lamp replacement cycle duration becomes shorter if the projector is operated repeatedly for short periods.
